CN

Lab 1) creating a topology and simulate sending PPU
    from source to destination using hub and switch as
                                    connecting device.

• Hub: is dumb device, it broad casts do all

• Switch: is a intelligent device, it checks destination
    IP address and sends only to those.

  s1)   set 2 devices.   configure — Its IP address
                                      — Its gateway.

  s2)   simulate switch   and hub.

  s3)   connect switch to 2 devices PC0 PC1
         connect hub to 2 devices PC2 PC3.
